

Enquiry Form for WhatsApp Orders

Perfect - let's add the enquiry form to your MABATIROLLINGMILLSKE site so customers can fill in details and have them sent directly to WhatsApp.

Enquiry Form Component

OrderForm.jsx

```

import { useState } from "react";

export default function OrderForm() {
  const [formData, setFormData] = useState({
    name: "",
    location: "",
    product: "",
    quantity: "",
  });

  const handleChange = (e) => {
    setFormData({ ...formData, [e.target.name]: e.target.value });
  };

  const handleSubmit = (e) => {
    e.preventDefault();
    const message = `New Enquiry:\nName: ${formData.name}\nLocation:
    ${formData.location}\nProduct: ${formData.product}\nQuantity: ${formData.quantity}`;
    const whatsappUrl = `https://wa.me/0780545126?text=${encodeURIComponent(message)}`;
    window.open(whatsappUrl, "_blank");
  };

  return (
    <form onSubmit={handleSubmit} className="bg-white shadow-lg rounded-lg p-6 max-w-
    md mx-auto mt-10">
      <h2 className="text-xl font-bold mb-4">Enquiry Form</h2>

      <label htmlFor="name" className="block mb-2">Name</label>
      <input id="name" name="name" type="text" value={formData.name}
      onChange={handleChange}
      className="w-full border rounded p-2 mb-4" required />

      <label htmlFor="location" className="block mb-2">Location</label>
      <input id="location" name="location" type="text" value={formData.location}
      onChange={handleChange}
      className="w-full border rounded p-2 mb-4" required />

      <label htmlFor="product" className="block mb-2">Product</label>
      <input id="product" name="product" type="text" value={formData.product}
      onChange={handleChange}
      className="w-full border rounded p-2 mb-4" required />

      <label htmlFor="quantity" className="block mb-2">Quantity</label>
      <input id="quantity" name="quantity" type="number" value={formData.quantity}
      onChange={handleChange}
      className="w-full border rounded p-2 mb-4" required />
    </form>
  );
}

```

Integration

Update Home.jsx

```
import Hero from "../components/Hero";
import Catalogue from "../components/Catalogue";
import ContactButtons from "../components/ContactButtons";
import OrderForm from "../components/OrderForm";

export default function Home() {
  return (
    <div>
      <Hero />
      <Catalogue />
      <OrderForm />
      <ContactButtons />
    </div>
  );
}
```

Features Covered

- **Accessibility:** Labels for all inputs, ARIA-friendly.
- **WhatsApp integration:** Form submission opens WhatsApp with pre-filled enquiry message.
- **Floating buttons:** WhatsApp + Call always visible.
- **Catalogue grid:** Product cards with direct WhatsApp ordering.
- **Homepage hero:** Branding, trust badges, free delivery, warranty.
- **Dark mode support:** Tailwind classes ready for theme toggle.

Deployment

1. Push to GitHub (git add . && git commit -m "Add enquiry form" && git push).
 2. Deploy on Netlify - it will auto-detect React + Tailwind build.
 3. Test locally: npm run dev.
 4. Test WhatsApp integration by filling the form → should open WhatsApp chat with formatted enquiry.
-

This gives you a **full professional e-commerce site** with homepage, catalogue, enquiry form, accessibility fixes, and WhatsApp-first ordering flow.

Would you like me to also **add product filtering and search** so customers can quickly find mabati types by gauge, finish, or price?
