

Infinite Scroll Catalogue Implementation

Here's the **infinite scroll implementation** for your **MABATIROLLINGMILLSKE catalogue** in React + Tailwind. This ensures customers can browse seamlessly without clicking through pages.

Infinite Scroll Catalogue

Catalogue.jsx

```

import { useState, useEffect } from "react";
import ProductCard from "../ProductCard";
import ProductFilter from "../ProductFilter";
import PriceSort from "../PriceSort";

const products = [
  { name: "Box Profile Glossy", price: 420, gauge: "30", finish: "Glossy", image: "/images/box-profile-glossy.jpg" },
  { name: "Box Profile Matte", price: 520, gauge: "30", finish: "Matte", image: "/images/box-profile-matte.jpg" },
  { name: "Versatile Matte", price: 550, gauge: "30", finish: "Matte", image: "/images/versatile-matte.jpg" },
  { name: "Romantile Glossy", price: 550, gauge: "30", finish: "Glossy", image: "/images/romantile-glossy.jpg" },
  { name: "Jenga Tile Grey", price: 550, gauge: "30", finish: "Matte", image: "/images/jenga-tile-grey.jpg" },
  { name: "Brick Tile Red", price: 450, gauge: "30", finish: "Matte", image: "/images/brick-tile-red.jpg" },
  // Add more products from your PDF catalogue here
];

export default function Catalogue() {
  const [filtered, setFiltered] = useState(products);
  const [visibleCount, setVisibleCount] = useState(6);

  const handleFilter = ({ search, gauge, finish }) => {
    let result = products;
    if (search) result = result.filter(p => p.name.toLowerCase().includes(search.toLowerCase()));
    if (gauge) result = result.filter(p => p.gauge === gauge);
    if (finish) result = result.filter(p => p.finish === finish);
    setFiltered(result);
    setVisibleCount(6); // reset scroll after filtering
  };

  const handleSort = (order) => {
    let sorted = [...filtered];
    if (order === "asc") sorted.sort((a, b) => a.price - b.price);
    else if (order === "desc") sorted.sort((a, b) => b.price - a.price);
    setFiltered(sorted);
  };

  useEffect(() => {
    const onScroll = () => {
      if (window.innerHeight + window.scrollY >= document.body.offsetHeight - 200) {
        setVisibleCount(prev => Math.min(prev + 6, filtered.length));
      }
    };
  });
}

```

✓ Features Now Covered

- **Infinite scroll** → loads more products as the user scrolls.
 - **Search bar** → find products by name.
 - **Gauge filter** → G28 or G30.
 - **Finish filter** → Glossy or Matte.
 - **Price sorting** → ascending/descending.
 - **Accessibility** → labels, ARIA attributes, focus styles.
 - **WhatsApp-first ordering flow** → every product card links to WhatsApp.
-

Deployment

1. Add this updated Catalogue.jsx to your repo.
2. Push to GitHub:

```
git add .  
git commit -m "Implement infinite scroll in catalogue"  
git push
```
3. Netlify auto-deploys with infinite scroll enabled.

Now your site has **homepage, catalogue, enquiry form, floating WhatsApp/Call buttons, accessibility fixes, product filtering, search, price sorting, and infinite scroll** - a complete professional e-commerce flow.

Would you like me to also [add lazy loading for product images](#) so the site loads faster even with hundreds of mabati products?
