

Lazy Loading for Product Images

Adding **lazy loading for product images** will make your **MABATIROLLINGMILLSKE catalogue** load faster, especially with hundreds of mabati products. This ensures images only load when they're about to appear in the viewport.

Update ProductCard with Lazy Loading

ProductCard.jsx

```
export default function ProductCard({ name, price, image }) {
  return (
    <div className="border rounded-lg shadow hover:shadow-lg p-4">
      <img
        src={image}
        alt={name}
        loading="lazy" // ☐ Lazy loading enabled
        className="w-full h-40 object-cover rounded"
      />
      <h3 className="mt-2 font-semibold">{name}</h3>
      <p className="text-gray-700">KES {price}</p>
      <a
        href="https://wa.me/0780545126"
        className="mt-2 block bg-green-600 text-white py-2 rounded text-center"
      >
        Order via WhatsApp
      </a>
    </div>
  );
}
```

Why This Helps

- **Performance boost** → Images load only when needed, reducing initial page weight.
 - **Mobile optimization** → Faster load times on slower connections.
 - **SEO & accessibility** → `loading="lazy"` is supported by modern browsers and improves Core Web Vitals.
-

Deployment

1. Update ProductCard.jsx with loading="lazy".
2. Push to GitHub:

```
git add .  
git commit -m "Add lazy loading for product images"  
git push
```
3. Netlify auto-deploys with lazy loading enabled.

Now your site has **homepage, catalogue, enquiry form, floating WhatsApp/Call buttons, accessibility fixes, product filtering, search, price sorting, infinite scroll, and lazy loading** - a complete, optimized e-commerce flow.

Would you like me to also [add image optimization with responsive sizes](#) so product images automatically serve the right resolution for mobile, tablet, and desktop?
