

MABATIROLLINGMILLSKE Image Manifest

Here's a **consolidated image manifest** for your **MABATIROLLINGMILLSKE catalogue**. This maps each product to a suggested image filename so you can drop them into /public/images/ and auto-render visuals in your React app.

Image Manifest

```

{
  "Versatile Roofing Sheets": [
    { "name": "Versatile Glossy", "image": "versatile-glossy.jpg" },
    { "name": "Versatile Matte", "image": "versatile-matte.jpg" },

    { "name": "Double Bubble Foil", "image": "double-bubble-foil.jpg" },
    { "name": "Polycarbonate Sheet 2mm", "image": "polycarbonate-2mm.jpg" },

```

✓ How to Use

- Save this manifest as image-manifest.json.
- Place all product images in /public/images/ with filenames matching the manifest.
- Import into React:

```
import imageManifest from "./image-manifest.json";
```
- Use the image field to render product visuals dynamically in your catalogue grid.

This manifest ensures **consistent filenames** and makes your catalogue auto-render images without manual setup.

Would you like me to also [merge this manifest with your product JSON dataset](#) so you have a single source of truth for both product details and images?
