

MABATIROLLINGMILLSKE Product JSON Dataset

Here's the **JSON dataset with product image mapping** added for your **MABATIROLLINGMILLSKE catalogue**. Each product now includes an image field pointing to a filename you can store in /public/images/.

JSON Product Dataset with Images

```
[
  {
    "category": "Versatile Roofing Sheets",
    "products": [
      { "name": "Versatile Glossy", "gauge": "30", "finish": "Glossy", "price": 550, "unit": "KES per meter", "image": "versatile-glossy.jpg" },

      { "name": "Corrugated Matte Maroon", "gauge": "30", "finish": "Matte", "price": 945, "unit": "KES per 3m", "image": "corrugated-maroon.jpg" }
    ]
  },
]
```

✓ How to Use

- Save this JSON as products.json.
- Place product images in /public/images/ with filenames matching the image field.
- Import into React:

```
import productsData from "../products.json";
```
- Map over categories and products to render catalogue dynamically with images.

This dataset now gives you **text + image mapping** for every product, ready for your React + Tailwind catalogue grid.

Would you like me to also [generate a React hook](#) that fetches this JSON and provides filtering, sorting, and infinite scroll logic out-of-the-box?
