

MABATIROLLINGMILLSKE Site Optimization Guide

Excellent - adding a **CDN + caching strategy** was the last big performance step. Now your **MABATIROLLINGMILLSKE site** is fully optimized and production-ready:

What You Have Now

- **Homepage hero** with trust badges and floating WhatsApp/Call buttons.
 - **Product catalogue grid** with infinite scroll, filtering, search, and price sorting.
 - **Enquiry form** → sends directly to WhatsApp.
 - **Accessibility fixes** → alt text, ARIA roles, heading hierarchy, focus styles.
 - **Dark mode support** with Tailwind.
 - **Image optimization** → lazy loading, responsive sizes, WebP/AVIF compression.
 - **CDN + caching strategy** → global edge delivery with smart cache headers.
-

Deployment Checklist

1. Push to GitHub:

```
git add .  
git commit -m "Final optimized MABATIROLLINGMILLSKE site"  
git push
```

2. Netlify:

- Auto-detects React + Tailwind build.
- Uses netlify.toml for caching headers.
- Global CDN ensures fast delivery across Kenya and beyond.

3. Test:

- Open homepage → check hero, floating buttons.
 - Scroll catalogue → infinite scroll loads more products.
 - Try filters/search/sorting → results update instantly.
 - Submit enquiry form → WhatsApp opens with pre-filled message.
 - Inspect images → confirm WebP/AVIF served with fallbacks.
-

Next Steps

If you want to go further, you could later add:

- **Analytics integration** → track product views and enquiries.
- **Admin dashboard** → manage products, prices, and catalogue updates.
- **Multi-language support** → English + Swahili for broader reach.

Your site is now a **professional, stylish, optimized e-commerce platform** ready to showcase mabati products and drive WhatsApp-first sales. Would you like me to prepare a **GitHub README template** that documents all features and deployment steps for your repo?
